## INSTALLATION INSTRUCTIONS

The combination KritterCap® PRO is a universal corner insert that can be used on most 4", 3½", 3", or 2¾" corner posts of vinyl-sided homes. It prevents entry of most small rodents and stinging insects.

#### Kit Includes:

- ✓ 10 KritterCap® PRO Inserts
- ✓ 1 Inspection Mirror
- ✓ 1 Flashlight
- ✓ 1 Set of Snips

1

#### Inspect the inside of the corner post.

Position the mirror under the corner posts and shine flashlight on it to inspect.

**NOTE:** Before installing KritterCap® PRO, be sure to clear the corner post. Rodents should be trapped and removed. Insect nests should be free of insects.

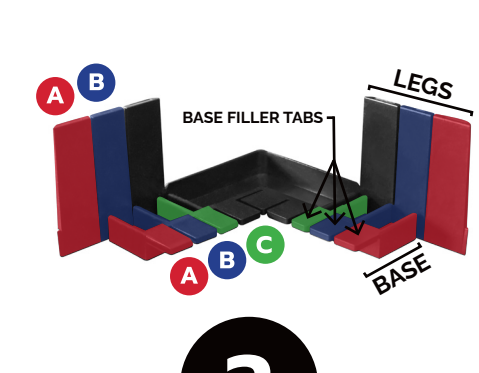

2

#### Measure the corner post.

**4" Corner Post:**  
Skip to step 4.

*Note: The tabs at the base are used for filling voids where the plywood subsiding or insulation board doesn't come to a perfect square corner. They should be removed if not needed.*

**3½", 3", or 2¾" Corner Post:**  
Proceed to step 3.

3

#### Cut KritterCap® PRO insert to the correct size.

**3½" Corner Post:**

Snip off Leg A and Base A on each end

**3" Corner Post:**

Snip off Legs A and B as well as Bases A and B

**2¾" Corner Post:**

Remove Legs A and B, as well as Bases A, B, and C

4

#### Insert KritterCap® PRO

Push cap up into corner. Start one side at a time "flexing" the vinyl corner until both posts are in place. Then push all the way up until the base tabs stop at the subsiding.

5

#### Inspect KritterCap® PRO

Use the mirror and flashlight to inspect for a good fit. These caps typically fit very snug. If it seems loose, remove the cap and put a couple dabs of adhesive sealant on the posts before pushing it back into place. Reinspect if needed.

**CAUTION** CHOKING HAZARD! Always properly discard all pieces removed for installation. Do not leave trimmed pieces on the ground where they are accessible to small children and pets.

# COMMON SIGNS OF CRITTERS IN CORNER POSTS

**CHEWED INSULATION**

**CHEWED SUBSIDING**

**INSECT NESTS**

**CRITTER FUR, TRACKS, OR  
"SMUDGES"**
